Education

Thakur College of Engineering and Technology

Bachelor of Engineering in Information Technology

Aug. 2023 – Present

CGPA - 9.25

Technical Skills

Languages: Javascript, C++, Python, SQL — HTML, CSS, YAML, Markdown

Developer Tools: Figma, VS Code, Git, Android Studio, Docker, AWS

Databases: MongoDB, PostgreSQL, Redis, MariaDB

Technologies/Frameworks: NextJS, Node.js, NestJS, Expo, Docusaurus, Auth0, GitHub Actions

Coursework: Computer Networks, Computer Architecture, Operating Systems, DBMS, Data Structures

Experience

ThinkAct AI

July 2025 – Jan 2026

Fullstack Engineer Intern

Remote – New Jersey, United States

- Built role-based authentication using Auth0 with 10+ roles and custom per-role onboarding emails via SendGrid, cutting onboarding time by 60%.
- Implemented 8-language UI support improving customer retention by 35% alongside a WebSocket chat module with real-time translation synced across email.
- Built an internal note-taking tool with Python backend used in semantic search for LLM-based document retrieval.
- Configured wildcard SAN SSL on EC2 for dynamic tenant domains boosting client brand visibility, Dockerized the full stack (Next.js, NestJS, Django + Ollama) cutting deployment time by 30%.

Vighnotech Inc.

Sept 2024 – Jan 2025

React Native Intern

On-Site – Mumbai, India

- Built a cross-platform Expo app from Figma designs with client-side PDF generation reducing server load by 60% with nightly builds for QA.
- Set up OAuth2 login with Gmail read access via OAuth2 scope and fetched SMS history via Android API.
- Built a vendor CRM interface centralizing user-to-vendor data flow improving service fulfillment speed by 40%.

Open Source

April 2024 – Present

Maintainer NativeFlow, Top Contributor at TheOdinProject

- Followed the standard open-source practice to ensure atomicity in commits/pull-requests corresponding to issues, thus tracking progress in building NativeFlow.
- Participated in Node:Revamp Project, while in parallel I also updated resources, project requirements and database issues on the TheOdinProject Website.

Projects

NativeFlow | TypeScript, GitHub Actions, Docusaurus, React, Markdown, RTL, NPM

[GitHub](#) | [Docs](#)

- Developed a utility-first styling library for React Native, enabling Tailwind-like styling but using objects.
- Wrote Docusaurus (.md to .tsx parsing) documentation with live Expo examples on a js.org approved domain.
- Benchmarked as the second-fastest styling library, only 8% slower than the native StyleSheet API.

SICK | React Native, TypeScript, GitHub Actions, Solana, Phantom/Tiplink Wallets, Gemini, Figma

[GitHub](#) | [Demo](#)

- Built a decentralized crypto investment app with copy trading, Phantom wallet and TipLink for wallet-less onboarding.
- Used CoinGecko and Jup.ag for live pricing with Gemini-based market analysis and a creator loyalty reward system.
- Awarded a monetary grant from CoinDCX India via Superteam for onboarding 1000+ users on Web3.

BelieveScreener | React Native, Expo, TypeScript, Helius RPC, Figma

[GitHub](#) | [Demo](#)

- Built real-time token price updates via Helius RPC WebSocket API.
- Made a Believe Portfolio feature that filters user tokens with a custom brand identity and mascot inspired by believe.
- Extended believe.fun's web functionality into a mobile app while keeping the UX as close to original version.

Fill My Cycle | JavaScript, jQuery, HTML, CSS

[GitHub](#) | [Live](#)

- Developed a lab evaluation calculator that auto-generates annual cycle entries for students.
- Achieved 500+ daily visits during semester peaks via SEO optimization.

Extracurricular

Tech Writing

May 2024 – Present

Author of technical guides and documentation

Online

- Published articles on SEO-friendly HTML metadata and UI styling on [dev.to](#), [Medium](#), and [HackerNoon](#).
